€uroStar Evaluation Explanation Page

Important: Information in this catalogue is provided for or by the breeder, who is solely responsible for its accuracy—not Sheep Ireland

Evaluations should not be the only selection tool you use—animals must also be physically assessed (e.g. mouth, feet). Physical faults cannot be offset by strong evaluations and should be avoided in breeding.

See below how to interpret the €uroStar catalogue.

€uroStars – How to interpret them

- Each star represents where the animal ranks on each index in 20% bounds
- ★ Represents the **bottom 20%** of the breed for that trait
- ★★★★★ represents the **top 20%** of the breed for that trait
- Higher stars = Higher predicted profitability €

Animals that only have the outline of a star represent animals that have within flock evaluations, this means the star rating of these animals cannot be compared to any other animals from a different flock.

Rank

- This figure shows where an animal ranks within its breed in 20% bands—for example, “Top 20%” corresponds to five stars, while “Top 21%” corresponds to four stars (see example below)

Acc% (Accuracy%)

- Accuracy indicates the amount of data behind each evaluation. Where Acc% is low, much less emphasis should be placed on the evaluation, and vice versa. Acc% is displayed for the Replacement and Terminal Index, e.g.

Acc 87%

Ancestry Information

Interpreting the Indexes and Traits

1) Replacement (€3.44) – Used to select rams for breeding both replacement females and slaughter lambs; This index combines survival, growth, fertility and milk traits. € value reflects **profit per lamb**, comparable across breeds.

2) Terminal (€2.86) – Used to select rams for producing slaughter lambs; focuses mainly on survival and growth traits of progeny. € value reflects **profit per lamb**, comparable across breeds.

3) Lamb Survivability – Ranks animals based on lambing ease and lamb survival rate. Every positive % point on this index is an extra lamb surviving past 48hrs.

4) Days to Slaughter – Ranks animals on their genetic ability to grow. Fewer days indicates faster finishing to target weight.

5) No. of Lambs Born – Ranks animals based on the predicted prolificacy of the females from this animal compared with other animals of the same breed.

6) Daughters Milk – Ranks animals based on the predicted milking performance of their daughters compared with other animals of the same breed.

More info:

Visit www.sheep.ie for the latest news and information, or ramsearch.ie for up-to-date evaluations; search for rams by county, breed, and breeder.

Additional Traits Sales Catalogue
